

7. Provision of a Seamless Broadband Environment through Expansion of Wi-Fi Service

- A new “Hikari Portable”, which has a Wi-Fi function on the cradle, in addition to the Wi-Fi function on the device itself, is scheduled for launch in the second quarter of FY2011. Even if the device is taken out of the home, wireless LAN will still be available inside the home.
- With the goal of constructing a Wi-Fi environment that covers the basic routes of daily life, NTT East will collaborate with convenience stores with installed optical circuits and other businesses, and by utilizing a new scheme, will aim to expand to 50,000 access points (end of FY2012).
- Can be used as an information station during disasters.

Enriched Home Environment

Outside of the Home

Expansion of FLET'S SPOT Areas

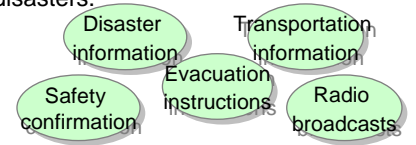

During Disasters

Use as an Information Station

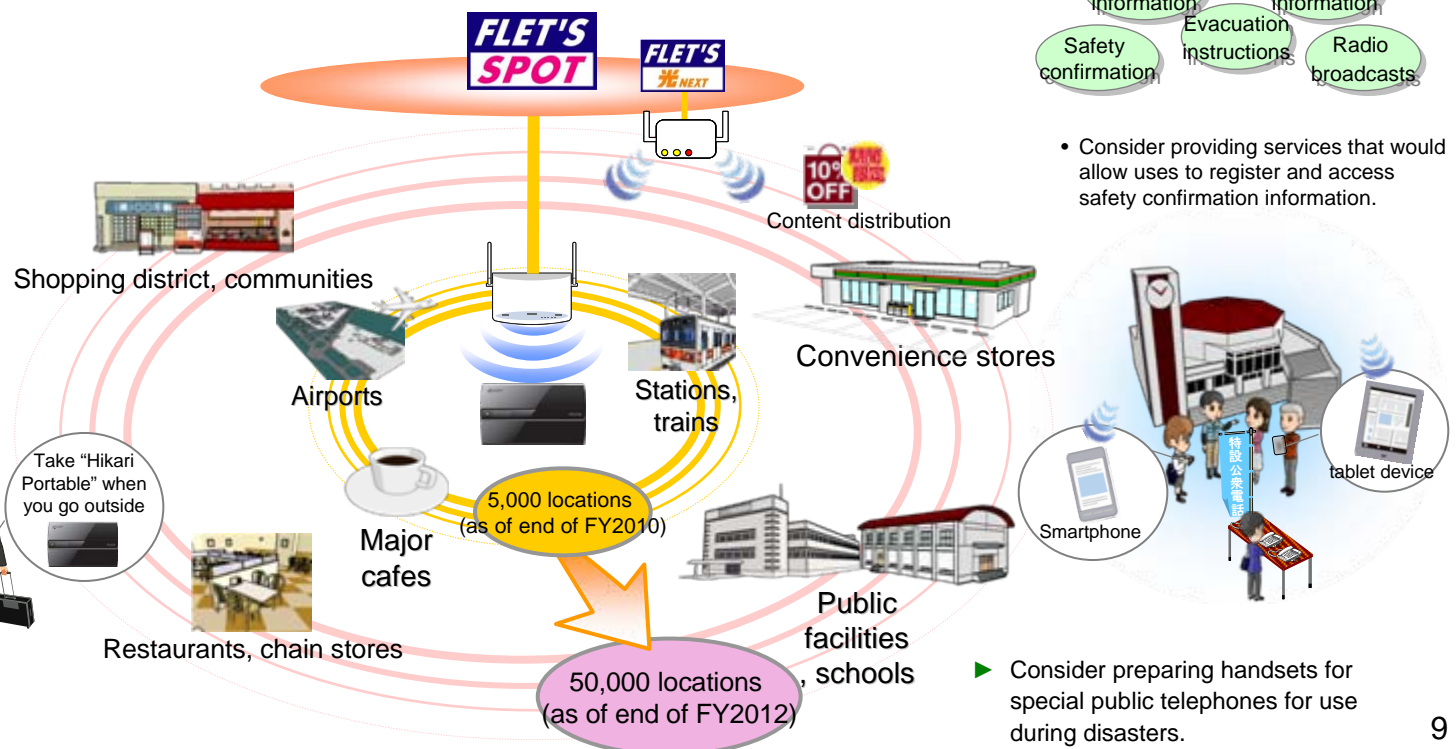

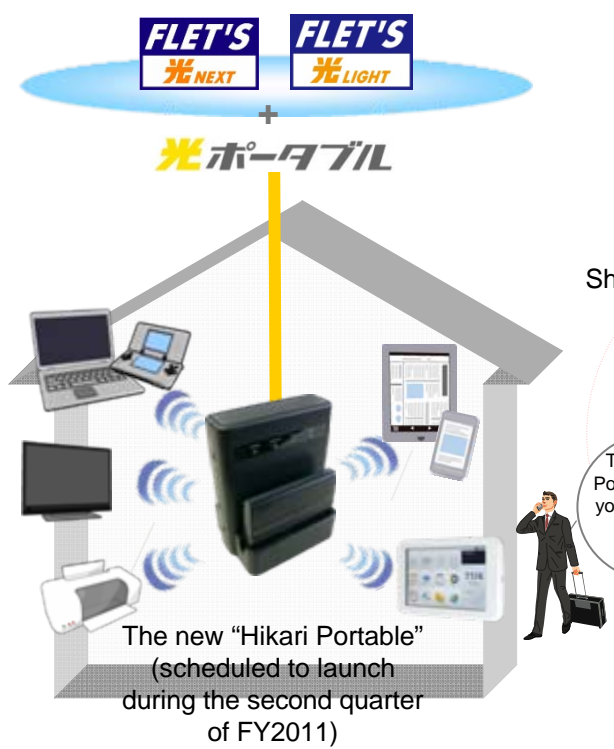

- ▶ The new Hikari Portable version comes standard with a Wi-Fi function on the cradle, allowing for a wireless environment at home, even when the device itself is removed.
- ▶ High-speed wireless, compatible with IEEE 802.11n

- ▶ Promote the building of a high-quality wireless environment that utilizes FLET'S Hikari lines for convenience stores and businesses looking to attract more customers and for public facilities.
- ▶ Businesses will provide content, in addition to FLET'S SPOT (e.g., coupons).

- ▶ Provides a Wi-Fi environment making it possible to connect to the Internet, as an information station during disasters.

- Consider providing services that would allow users to register and access safety confirmation information.

- ▶ Consider preparing handsets for special public telephones for use during disasters.
